

ENVIRONMENTAL POLICY

Swedrive develops and produces worm gear drives and screw jacks. It is our aim to work actively and systematically on minimising the environmental impact due to the manufacture and use of our products

Swedrive undertakes to:

- minimise the extraction of natural resources.
- streamline its operations to reduce the overall volume of waste.
- meet the minimum provisions of legislation in the environmental field, plus other requirements and regulations that affect us.
- develop products so that their environmental impact is minimised during production, use and disposal.
- have procedures in place for measuring the company's environmental performance.
- work to ensure continual improvements are made in our operations in terms of the environment.
- prevent pollution.
- where technically possible and economically appropriate, choose products that have the least impact on the environment.
- train our staff in environmental matters. The training must be based on the needs of the individual member of staff.
- each year, set environmental objectives (overall objectives and detailed targets) that are followed up.
- communicate this environmental policy to all employees.
- ensure this environmental policy is available to the public.
