

## QUALITY POLICY

Swedrive's business is the development, manufacture and marketing of transmission products of high technical quality to meet customer-specific needs, with special solutions being a major option in this respect.

Our quality systems are designed to ensure:

**The right product, in the right way, at the right place  
and the right time.**

For us, quality means:

- the customer's requirements, wishes and expectations must be clearly defined and handled in the best possible manner throughout the entire organisation right through to finished product.
- a well-defined and fully functional organisation with cooperation at all levels.
- continually improving our work on quality
- the company's staff must be given an opportunity for continuous education and individual development, in order to ensure the company's levels of expertise are increased in line with increasingly demanding requirements.
- flexible production to meet the customer's requirements for fast and reliable deliveries. Flexibility is not inconsistent with efficient and effective production scheduling. The production department must be provided with unambiguous, correct data.
- the company's suppliers must be chosen with care and a view to long-term cooperation; they must be provided with the correct data and the requisite technical support.
- Swedrive must devise measurable quality targets on a yearly basis. These must be followed up and evaluated at the time of managerial review.
- all employees of Swedrive must be versed in our quality policy and actively strive to meet its requirements.
- the quality system must meet the requirements of SS-IS09001:2015.
